

OLYNTO LLP

Innovating Today. Empowering Tomorrow.

AGRICULTURE • COMMERCE • EDUCATION • TECHNOLOGY

"Growing Beyond Boundaries."

ABOUT OLYNTO

Olynto LLP is a founder-led business group building a portfolio of ventures out of Karnataka, India starting from the soil and scaling into software. Incorporated on 5 December 2025 under the Limited Liability Partnership Act, 2008, Olynto operates on a house-of-brands model: one parent enterprise, multiple independently-run businesses, each solving a distinct real-world problem for a distinct set of customers.

We didn't start as a technology company or an agriculture company, we started with a question: which everyday problems, in commerce, in education, in farming, are being solved poorly, and how would we solve them if we owned the entire experience end to end? That question is now three operating businesses, with more in development.

Every Olynto venture is built to the same standard: solve a real problem for a real customer, prove it in one market before scaling it to the next, and run it as a business that can stand on its own and not a side project under a parent's name.

VISION

To build a globally respected group of businesses that transforms how people work, learn, trade, and access essential products through innovation, sustainability, and relentless customer focus.

MISSION

- Build ventures that create measurable, long-term value — for customers first, and for shareholders as a result.
- Enter markets that are underserved rather than overcrowded, and out-execute rather than out-spend.
- Hold every product and service we ship to a global quality benchmark, regardless of where it's built.
- Give every operating business the autonomy to move fast, backed by the credibility of the Olynto name.
- Grow globally while staying accountable to the communities and markets we start in.

CORE VALUES

- 1.Integrity** — We say what we mean and do what we say — with customers, partners, and each other.
- 2.Customer First** — We build for the customer we have, not the customer a slide deck describes.
- 3.Speed with Discipline** — We ship, measure, and improve — not perfect, then launch.
- 4.Ownership** — Every venture is expected to be sustainable on its own economics, not subsidised indefinitely.
- 5.Sustainability** — We choose durable growth over fast growth when the two conflict.
- 6.One Standard** — Every team, in every venture, operates with the same bar for quality and honesty.

THE OLYNTO GROUP OF COMPANIES

Olynto LLP operates as a parent enterprise to a small, focused set of operating businesses — each with its own brand, team, and go-to-market, unified by the Olynto standard for quality and execution.

NoQkart | Hyperlocal Commerce & Booking

Skip the queue. Book, order, arrive — instantly.

NoQkart is Olynto's hyperlocal booking and ordering platform, built to remove the single most common friction point in local commerce: the wait. It connects nearby customers directly to local businesses — from food and retail to services — for real-time ordering, booking, and queue-free fulfilment, starting with a phased city rollout in Belagavi, Karnataka.

- A mobile-first platform (React Native) with a live, real-time backend, built for speed and reliability at the neighbourhood level.
- Launching zone-by-zone rather than city-wide, so every launch market gets a genuinely reliable, well-serviced experience before the next one opens.
- Built and led by a dedicated in-house engineering and execution team under Olynto LLP.

I AM ROOT™ | Organic Agriculture & Natural Products

From root to shelf — nothing added, nothing lost.

I AM ROOT™ is Olynto's agriculture and natural-products venture, born from the group's original grounding in organic farming. It develops and markets natural, minimally processed agricultural products — beginning with moringa — for customers who want traceable, honestly sourced food and wellness products rather than mass-processed alternatives. The venture is built for international reach from day one, holding an Import Export Code (IEC) that makes it export-ready, not just export-aspirational.

- Products developed and sourced with full traceability from farm to finished product.
- Export-ready from inception — I AM ROOT™ holds a registered IEC, enabling direct entry into international markets alongside domestic retail.
- Built to global quality and packaging standards so the same product line can serve both Indian consumers and overseas buyers.
- The commercial proof point for Olynto's broader ambition in organic and export-grade agriculture.

Olynto Elevate | Education & Skill Development

Placement-ready skills, not just certificates.

Olynto Elevate is Olynto's education and skill-development arm, built specifically to close the gap between engineering degrees and industry-ready technical skills. Rather than generic training content, Elevate runs hands-on, cohort-based workshops — its inaugural programme, launched with AITM, focused on AI-powered web development — designed around what employers are actually hiring for.

- Curriculum built around live, portfolio-worthy projects rather than passive lectures.
- Designed in partnership with academic institutions to reach engineering students directly on campus.
- The first step toward a broader Olynto Elevate programme spanning multiple technical skill tracks.

Olynto LLP continues to evaluate and incubate new ventures under the same house-of-brands model — each one launched only when it meets the group's standard for a real, provable customer problem.

THE OLYNTO ADVANTAGE

- **Founder-Led, Not Committee-Run** : Every venture is run by people close to the problem, not managed from a distant head office.
 - **Prove It Small, Then Scale** : Each business is validated in one focused market before it is scaled , no premature national rollouts.
 - **One Group, Compounding Advantages** : Agriculture, commerce, education, and technology ventures share operating discipline, talent, and brand trust across the group.
 - **Startup Speed** : Lean by design, fast by necessity , the structural advantage every large incumbent has lost.
 - **Built to Last** : Traceability, honest sourcing, and durable business models over short-term optics — in every vertical.
-
